

Our Basic Surgical Actions-10 (BSA-10)

BSA-10	Video Example		Description
Aspiration (797 video clips)			Removing fluids, or tissue debris from the surgical site, typically through a suction device.
Clipping (952 video clips)			Applying surgical clamps to control bleeding or temporarily occlude blood vessels or tissue.
Coagulation (635 video clips)			Applying thermal energy to promote hemostasis by denaturing proteins, forming a stable clot and sealing tissue.
Dissection (5273 video clips)			Separating or cutting of tissue layers to expose underlying structures during surgery and access deeper anatomical layers.
Knot-tying (355 video clips)			Twisting the suture material in a series of loops and tying a suture to secure tissues together.
Needle Grasping (775 video clips)			Moving the instrument towards the needle in a smooth, controlled manner and grasping the needle, emphasizing the dynamic motion of "go to grasp".
Needle Puncture (811 video clips)			Driving a needle to penetrate the tissue and ensuring that the needle enters the tissue at the desired angle and depth.
Packaging (149 video clips)			placing tissue or other materials into a sterile bag, minimizing contamination and maintaining a clean surgical field.
Suture Pulling (807 video clips)			Drawing the suture material through the tissue after the needle has passed through it. This action is achieved by pulling the needle or thread.
Tissue Retraction (1361 video clips)			Holding and manipulating tissues or organs aside to provide better visibility and access to the surgical site.
